PROBLEM STATEMENT

Develop a personalized content recommendation engine for Fire TV that considers mood, past behavior, and time of day. Create innovative social features for shared viewing experiences. Focus on AI-driven content recommendation and social watching across OTT platforms.

Problem

Fire TV users usually face:

Content overload with irrelevant or impersonal recommendations.

01

A disconnection from content due to lack of emotional context.

02

A lonely viewing experience, missing shared moments and group engagement.

03

SCOPE OF INNOVATION

We aim to build a smart, AI-driven Fire TV experience that not only personalizes content but also connects users socially and emotionally.

SOLUTION

Emotion-Aware Personalization

Recommends content using a fusion of:

User-Selected Mood

A simple, button-based mood input triggers tailored suggestions

Viewing history

Recommendation on the basis of the content the user usually likes to watch.

Time of Day Usage

Time aware viewing patterns

Social watch sync feature “Unify”

A feature that will:

Profile Blending

Enable cross-user profile blending for common recommendations.

Joint Recommendations

Merge multiple users' watch histories, genres and moods

Fun, collaborative Fire TV experience

Enable synced watchlists and co-watching prompts

WHO IS OUR CUSTOMER?

Primary Users

GenZ & Young Adults

- Prefer to watch content based on their mood instead of genre
- Seek instant, curated suggestions without scrolling
- Want to connect socially through content without simultaneous viewing

Shared Device Households

- Households with multiple users access Fire TV via separate profiles
- Desire personalized content without blending preferences across profiles
- Appreciate intelligent overlap suggestions that acknowledge shared interests without forcing synchronization

User Behaviours & Painpoints

"I just want something that fits my mood right now."

Static recommendations don't adapt to emotional context

"I've seen all of this already, show me something new."

Repetitive suggestions reduce content discovery

"Oh, my friend watched this? I want to try it too."

Lack of socially influenced suggestions from familiar users

"Typing on the TV remote is a pain, not doing that."

High interaction friction through TV-based input

WORKING BACKWARDS FROM USER NEEDS

Identified Need	Our Response
Mood-based content discovery	Mood input buttons power a dynamic recommendation model
Reduced content fatigue	Ensuring fresh, diverse suggestions
Socially relevant recommendations	‘Unify’ feature gives friend/activity-based content cues
Low-friction interaction	Remote-friendly design; no chat or forced real-time synchronous viewing required

SUCCESS METRICS

Emotion-Aware Personalization

Success Metrics	Targets to Achieve
Engagement Rate: Increase in the watch time for recommended content	20% increase
Recommendation Accuracy: A satisfaction rating after the content has been watched.	~4/5
Content Rejection: Abandonment of content by the consumer within 10 mins of watch-time.	30% reduction
Mood-Selection Adoption: How frequently users use this new feature.	40% of active users

IMPACT

Enhancing User Experience

Creating a more emotionally intelligent Fire TV interface that understands the user's mood and habits, making content feel personally curated rather than algorithmically forced.

Improving Content Discovery

Helping users find what they actually want to watch, not just what's trending or being pushed.

Accurate Recommendations

A ~4/5 satisfaction rating reduces decision fatigue, one of the biggest frustrations in streaming platforms. It's like giving every user a concierge rather than a billboard.

Increase in Platform Loyalty

The effect of personalization boosts long-term use and audience retention.

SUCCESS METRICS

“Unify”

Success Metrics	Targets to Achieve
Feature Adoption Rate: Fraction of the total content consuming population using this feature	More than 45% of users
Virality: Average number of users invited via blend	~2 users per profile
Content Satisfaction: A rating after showing the blend insights for feedback from the users	~4/5
User Loyalty: Increase in weekly active users due to addition of the new social features	20% increase

IMPACT

Shared Delight Among Users	Sense of Togetherness	Enabling Emotional Intelligence
Enabling users to blend their profiles and sync watchlists, building a vibrant social ecosystem by connecting multiple viewers with personalized, joint recommendations.	Making remote or group viewing more interactive and emotionally engaging, encouraging social interaction and bonding.	Increasing platform value and competitive differentiation by embedding social and emotional intelligence into the viewing experience, creating a Fire TV that’s not just smart, but socially smart.

SCOPE FOR SCALABILITY & MARKETPLACE DOMAIN EXPANSION

RECOMMENDATION ENGINE ARCHITECTURE

UNIFY ENGINE ARCHITECTURE

PRIVACY & PERSONALIZATION

Balancing tailored experiences with user trust is at the heart of our design.
We ensure personalization never comes at the cost of privacy.

You Set the Vibe

Mood data is collected only when users actively choose to share it.

Smart Happens On-Device

Watch history and behavior stay local i.e personalized suggestions are generated without sending data to external servers.

A Profile That's Truly Yours

Each profile maintains isolated data, ensuring personalized experiences without overlap.

Social, On Your Terms

Strictly opt-in features respecting user preferences and boundaries.

THANK YOU VERY MUCH!

Here's to reimagining Fire TV — smarter, personal, and effortlessly social.
